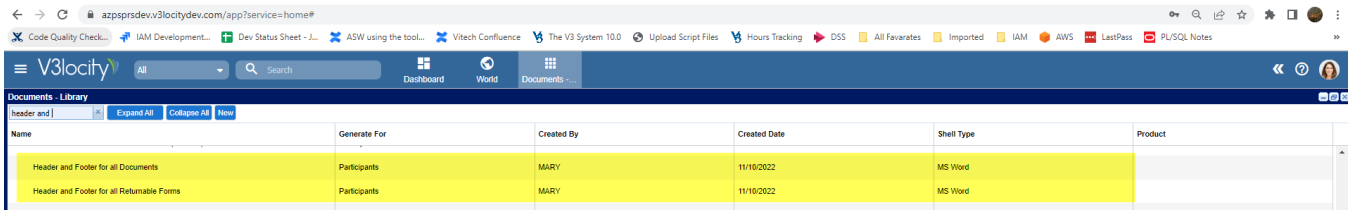
Document Template design process

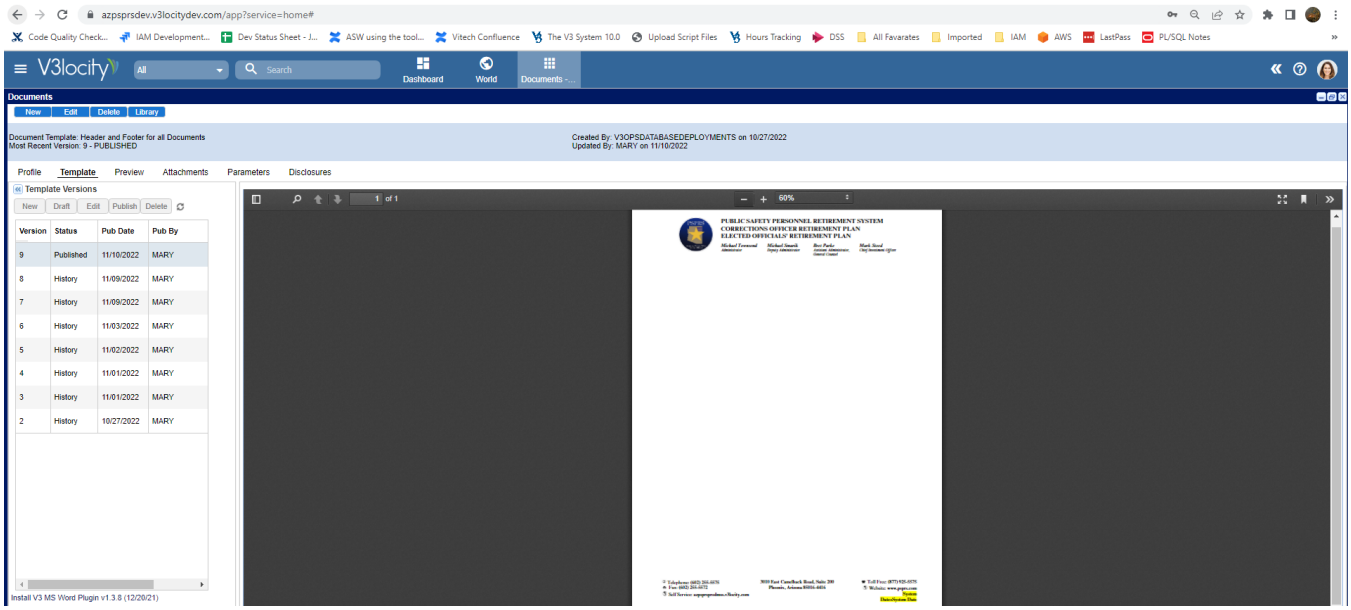
There are two sections on this page, one that explains how to place view bookmarks in MS Word documents, and another that explains how to add headers and footers to MS Word documents.

1) Explains how to add headers and footers to MS Word documents.

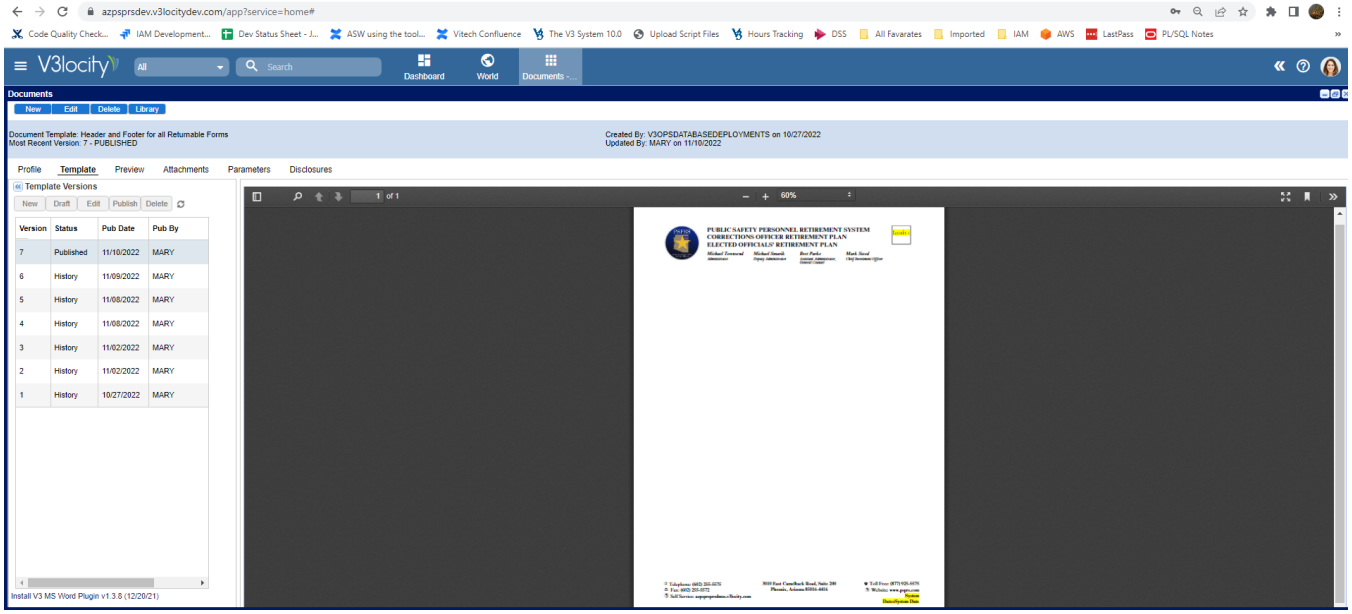
- We will have only 2 header and footer templates - one with barcode (for returnable forms) and another without barcode (for letters).



- Header and footer for all documents



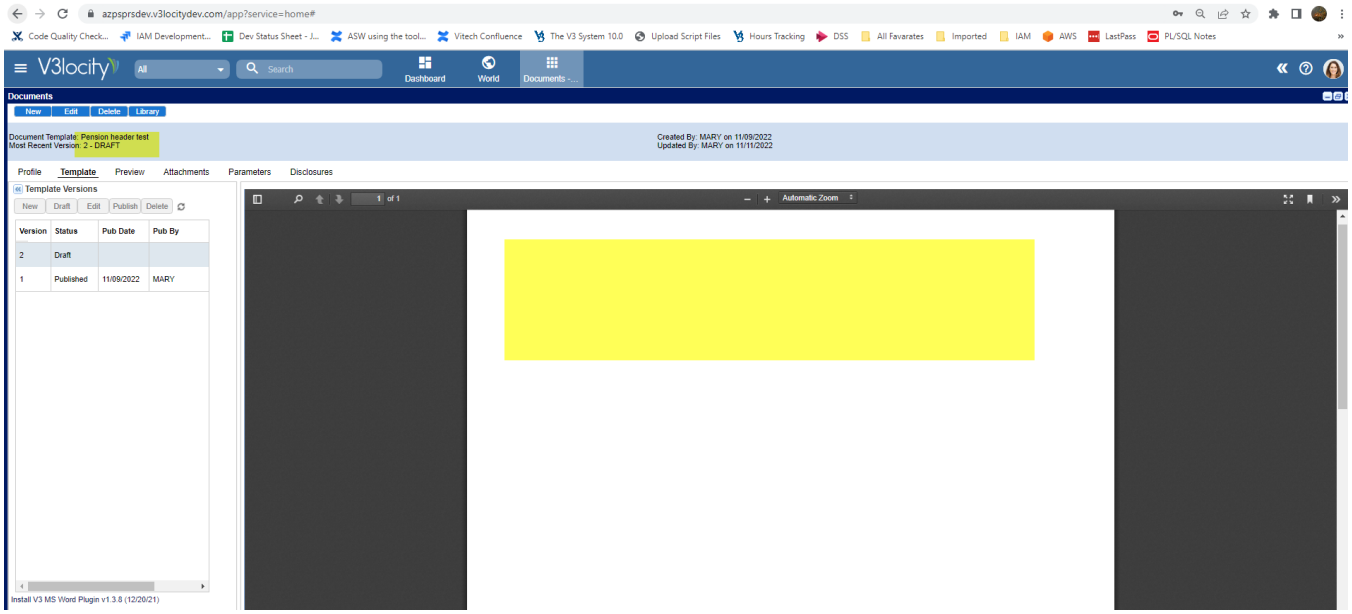
- Header and Footer for all Returnable Forms



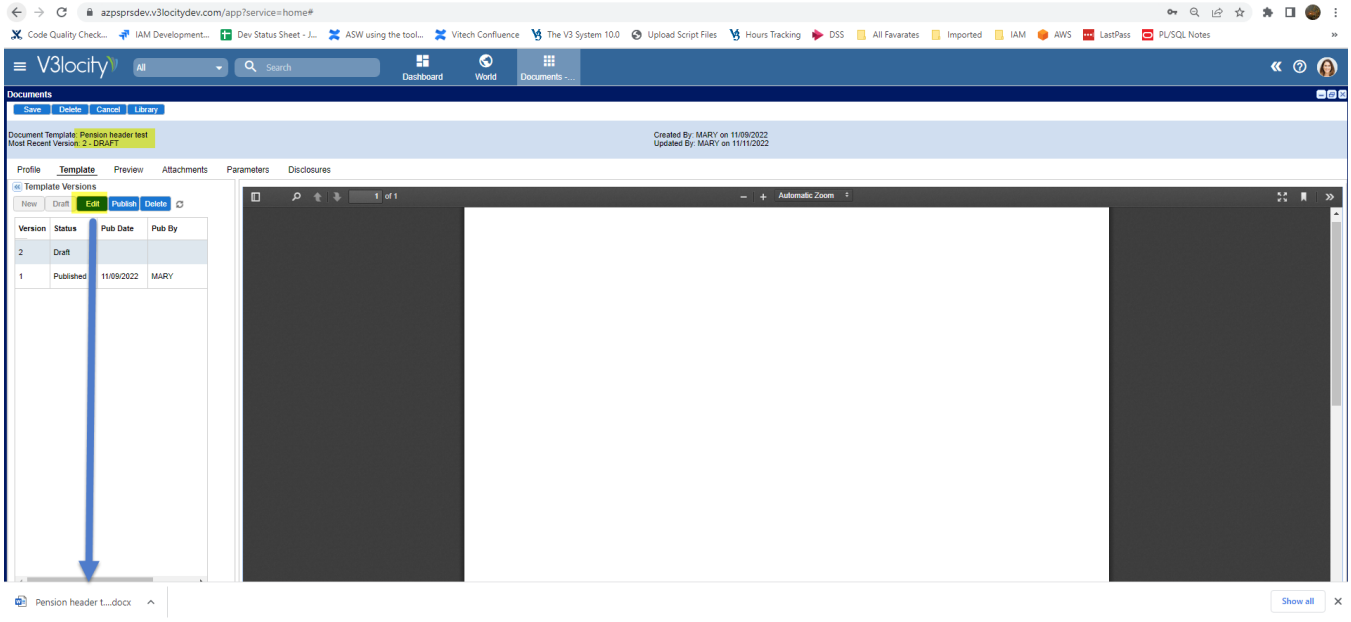
- Above, both documents are parent documents. They must be embedded into their children's documents.

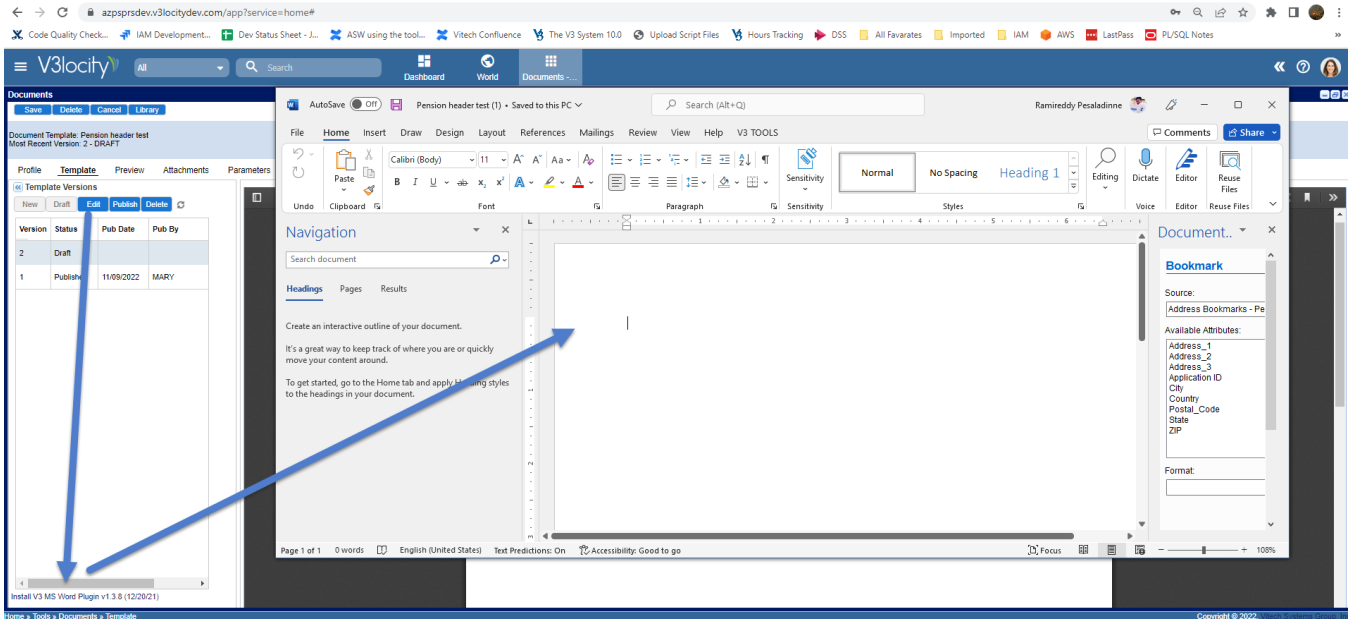
When embedding into child documents, please follow the steps below.

Open the child doc shell.(provided below one example).



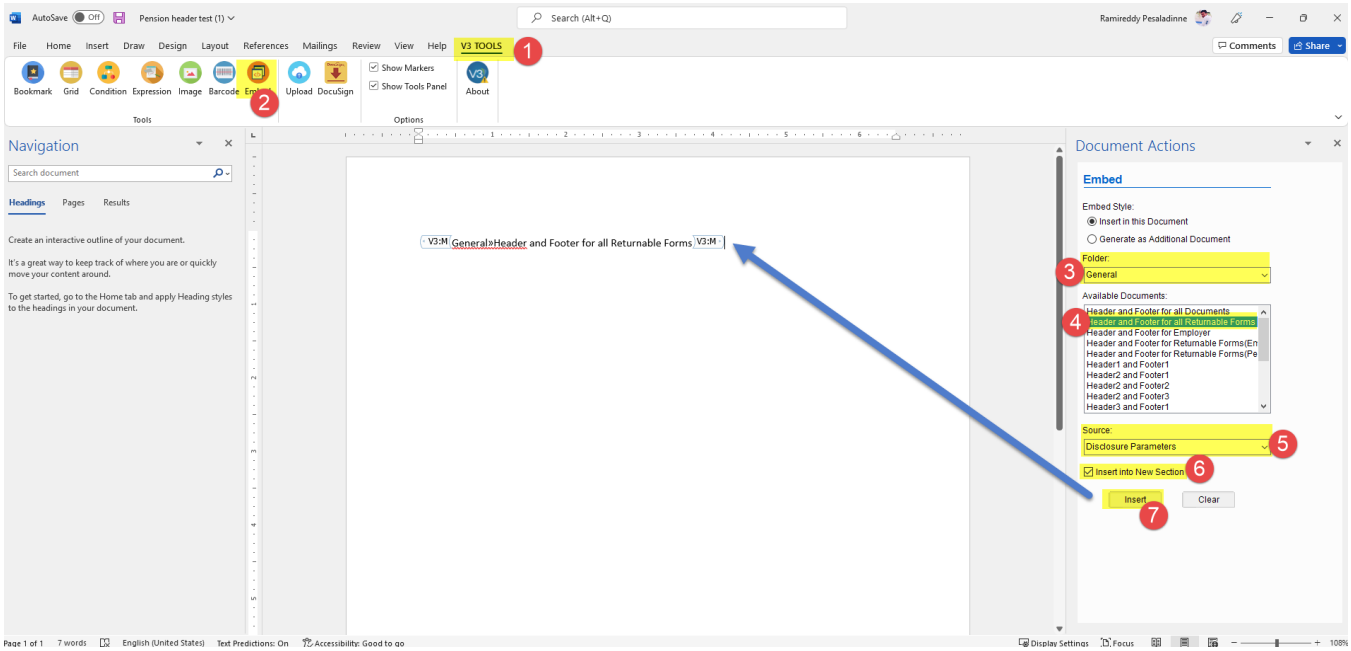
Open doc shell word.



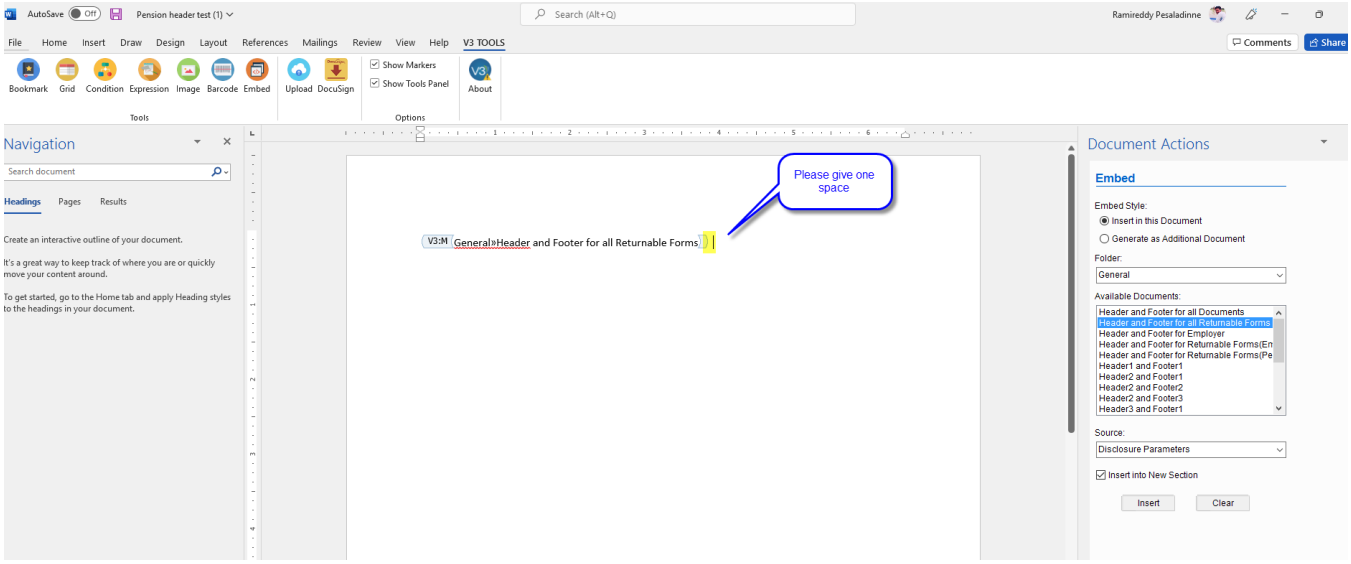


V3tools embedded->general(folder)select one doc shell(header and footer for all documents/Header and footer for returnable forms) in Available Documents drop down select disclosure parameter in source dropdownclick on insert into new sectionclick on insert button.

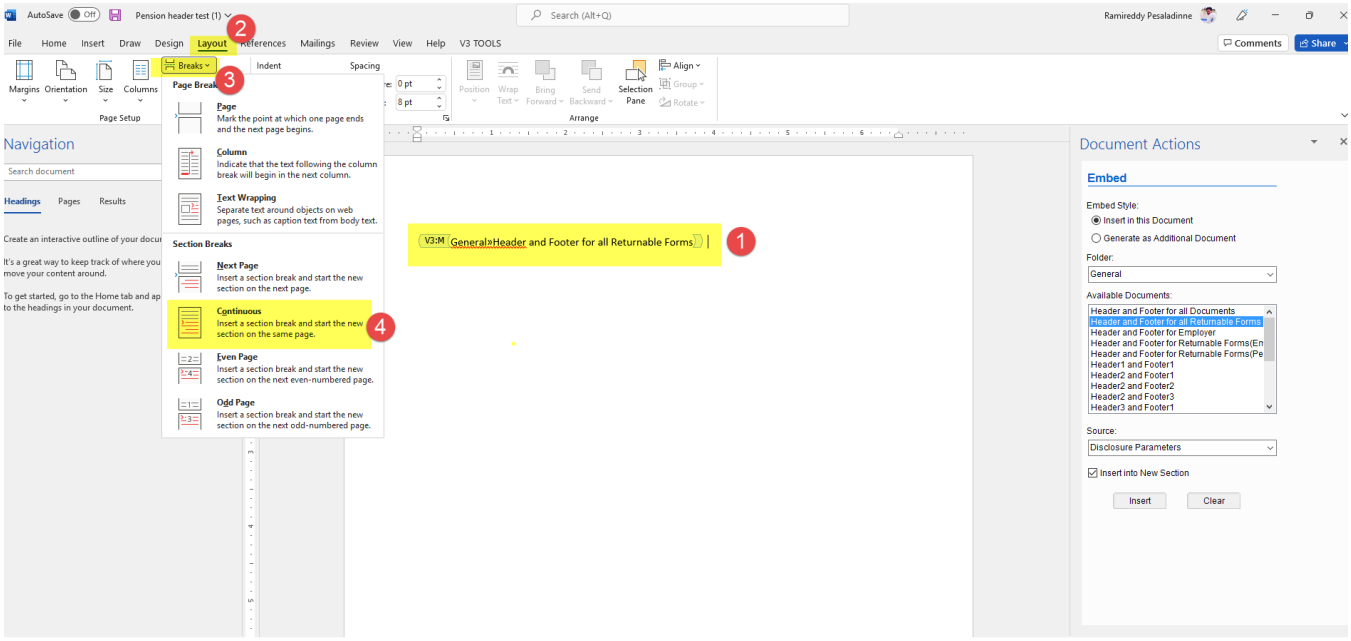
Provided below screenshot for reference.



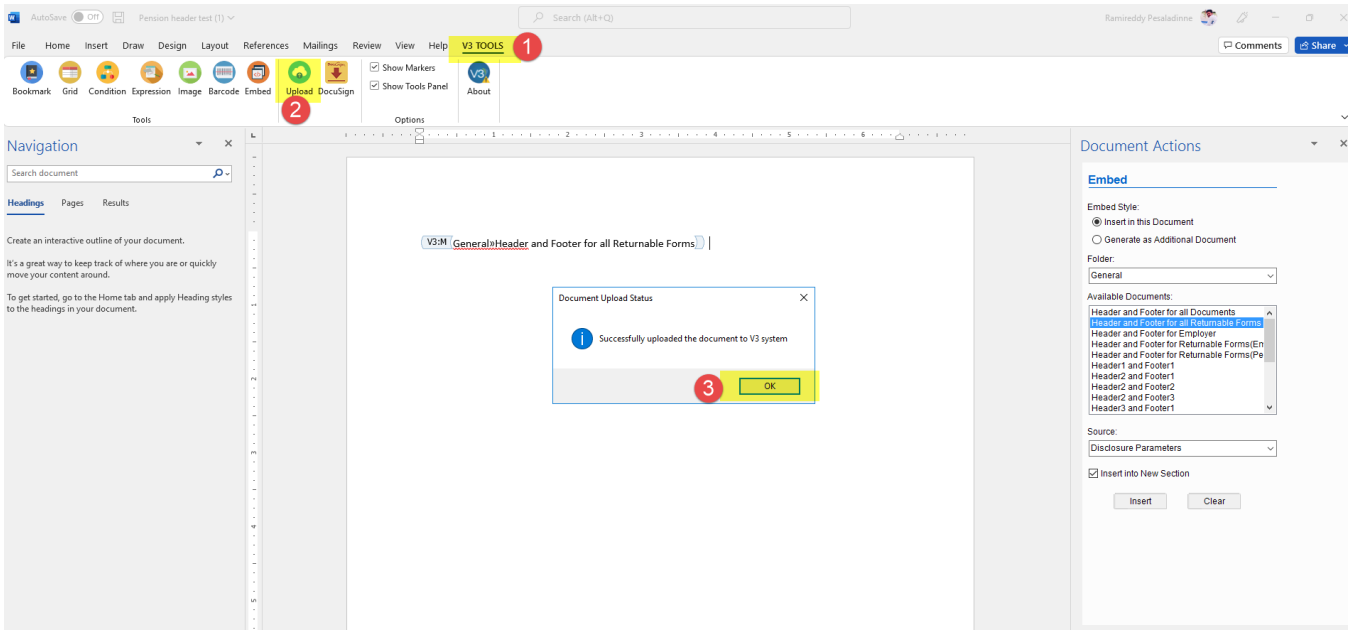
Please give one space after inserting embedded doc shell.



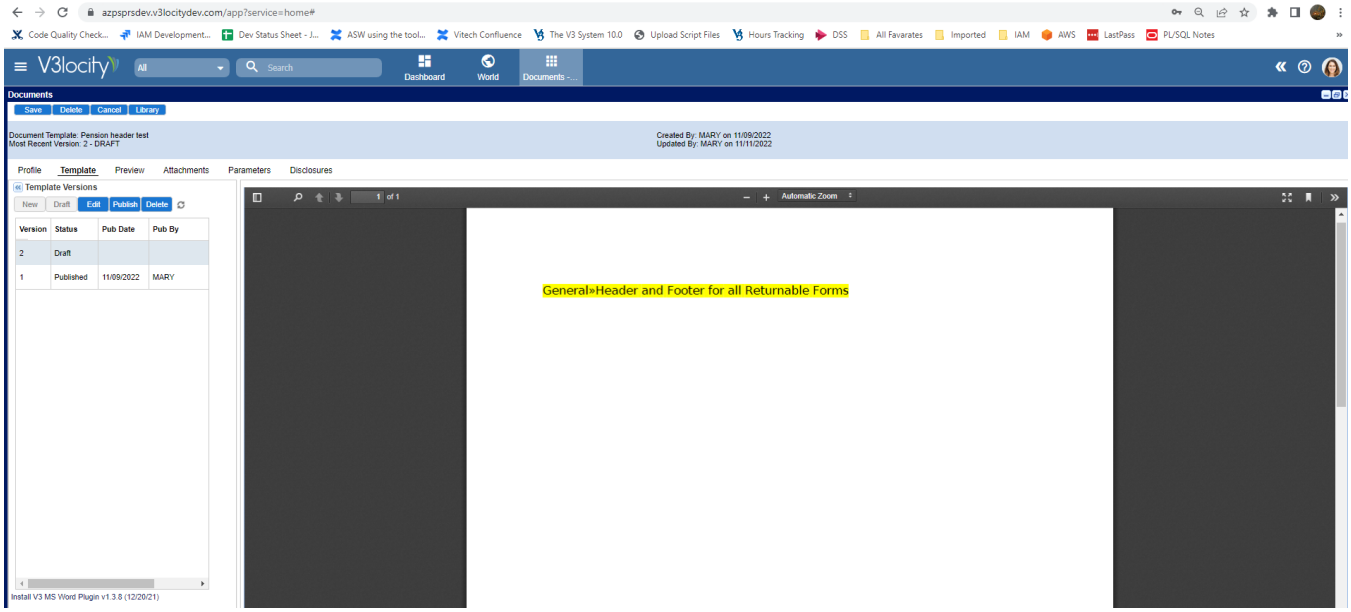
Please select layout breaks continuous.

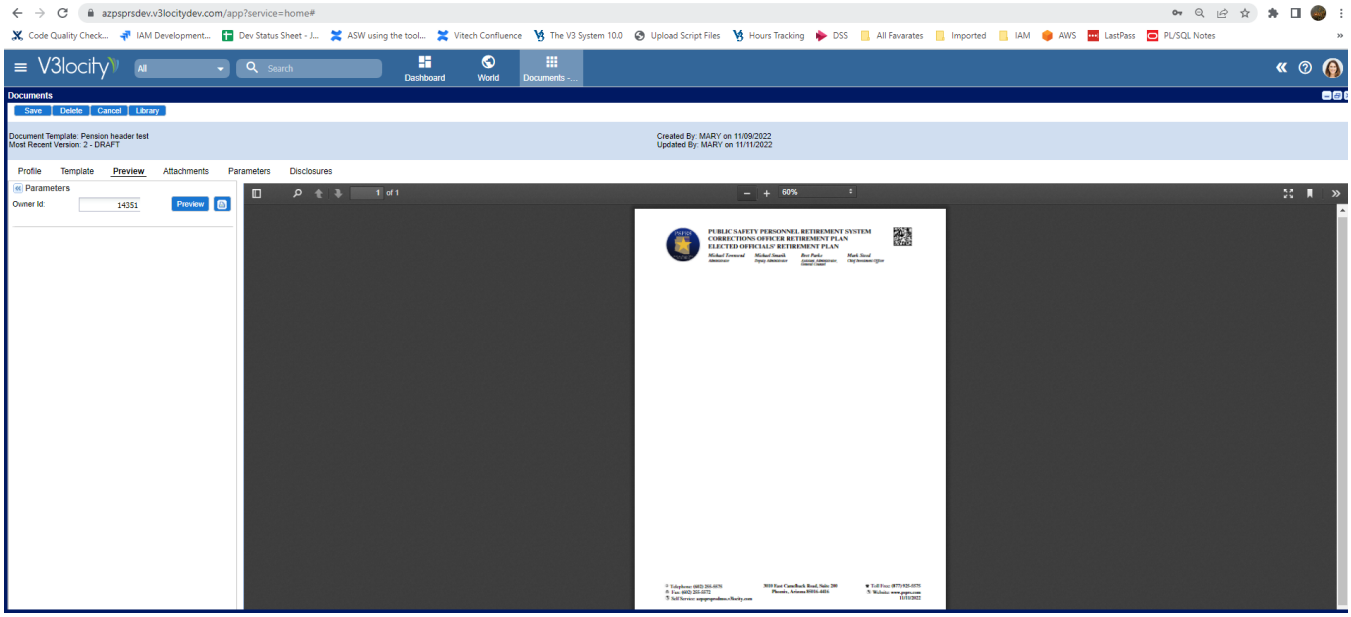


Select V3tools->upload OK,



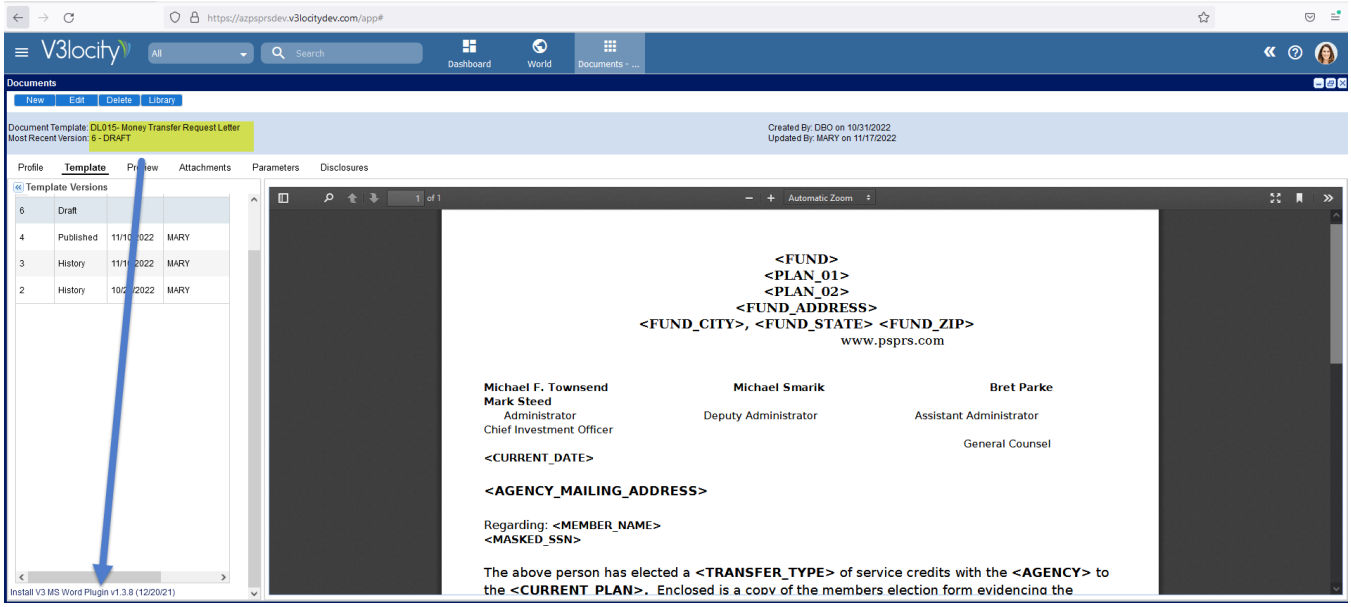
After uploading document into V3 system, please check document preview.



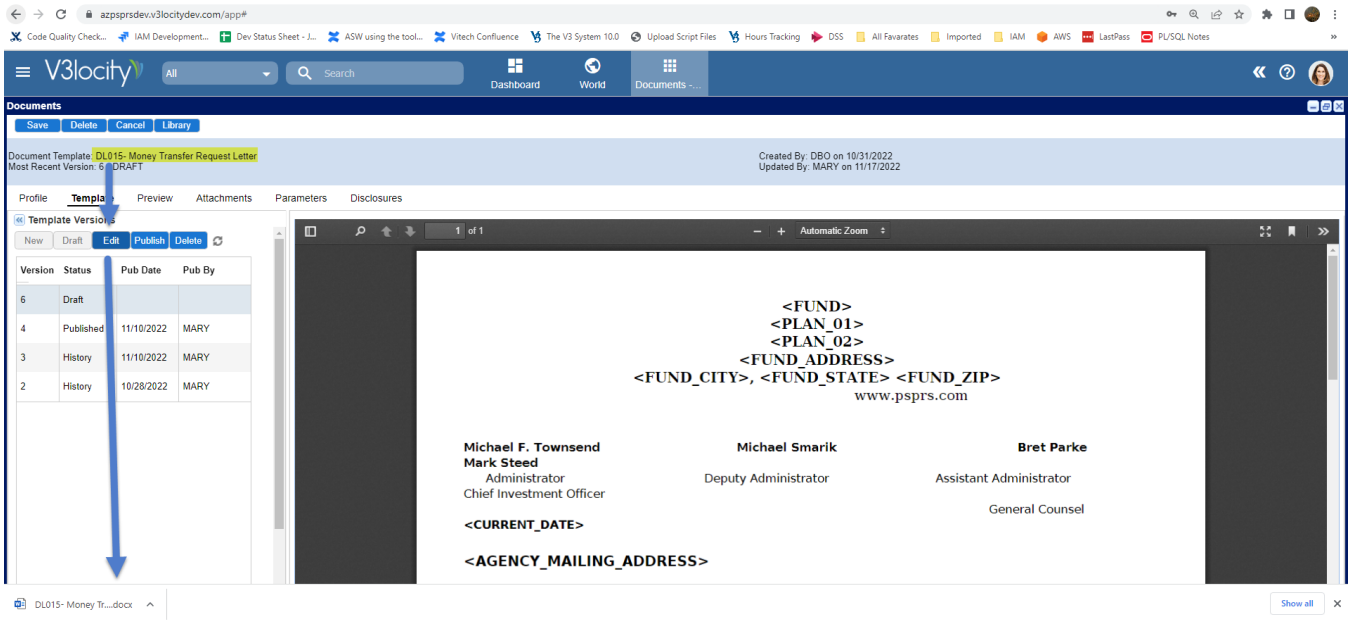


2) Explains how to place view bookmarks in MS Word documents.

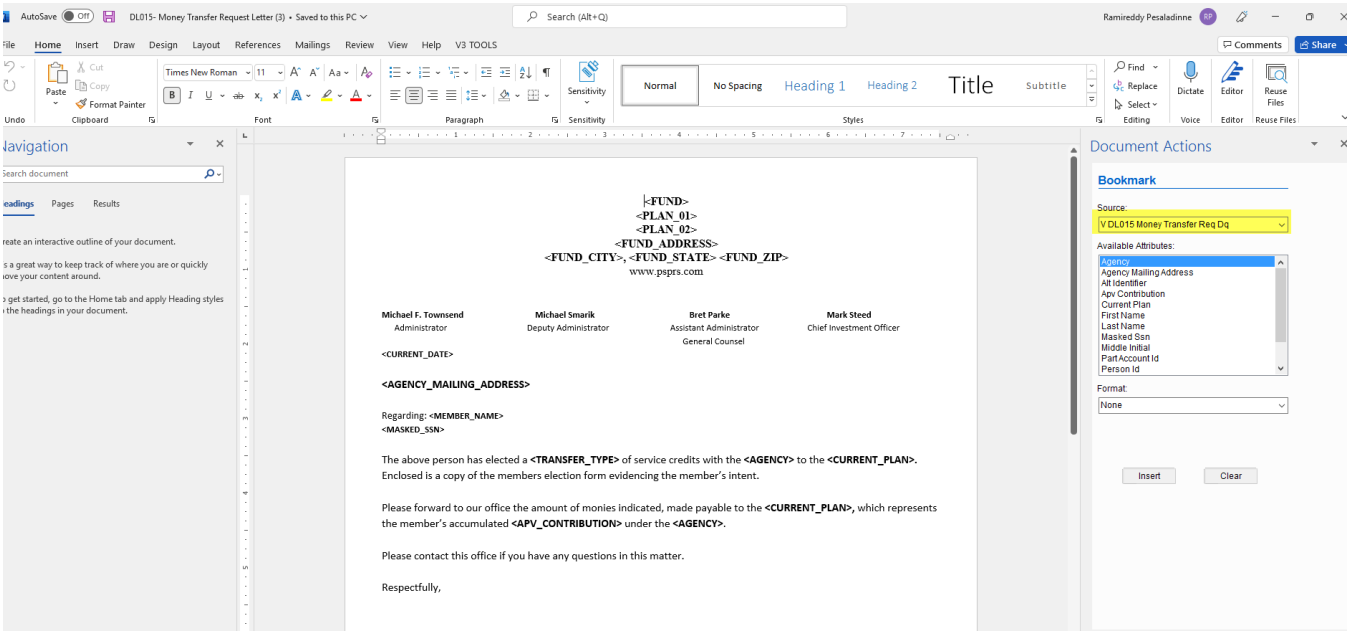
- While placing bookmarks to do shell we need to Install V3 MS Word Plugin.



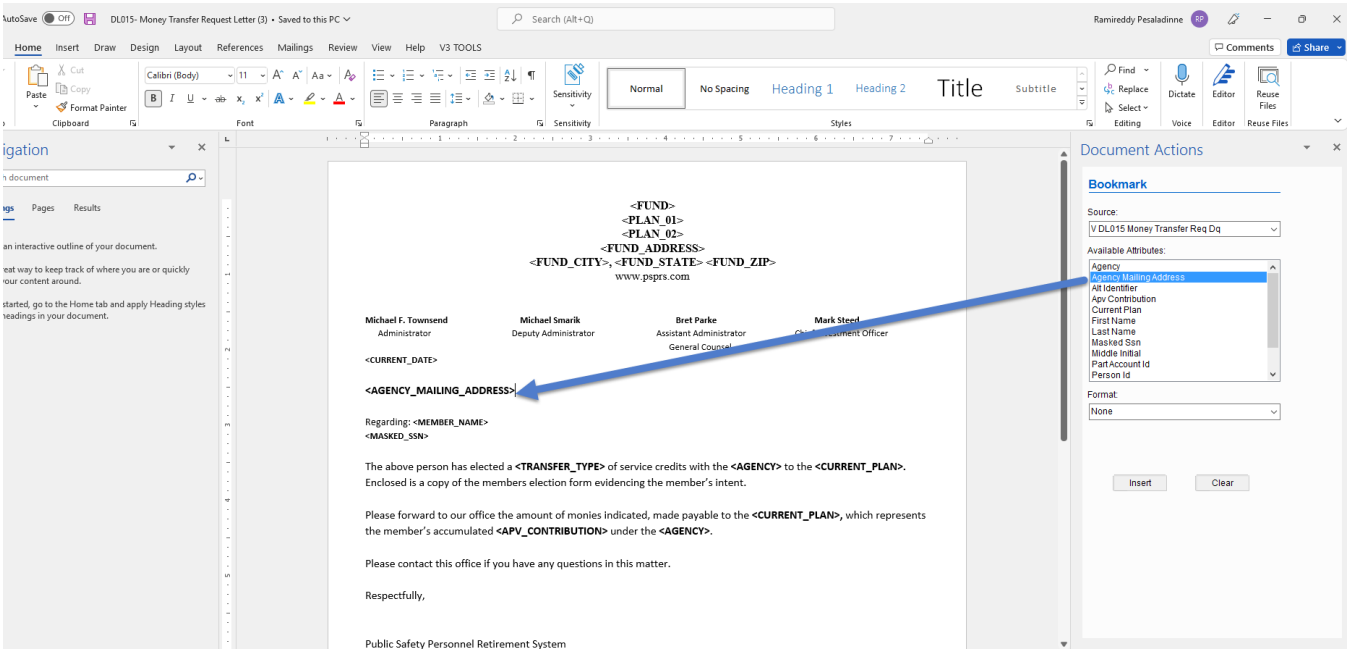
- Please draft then edit.



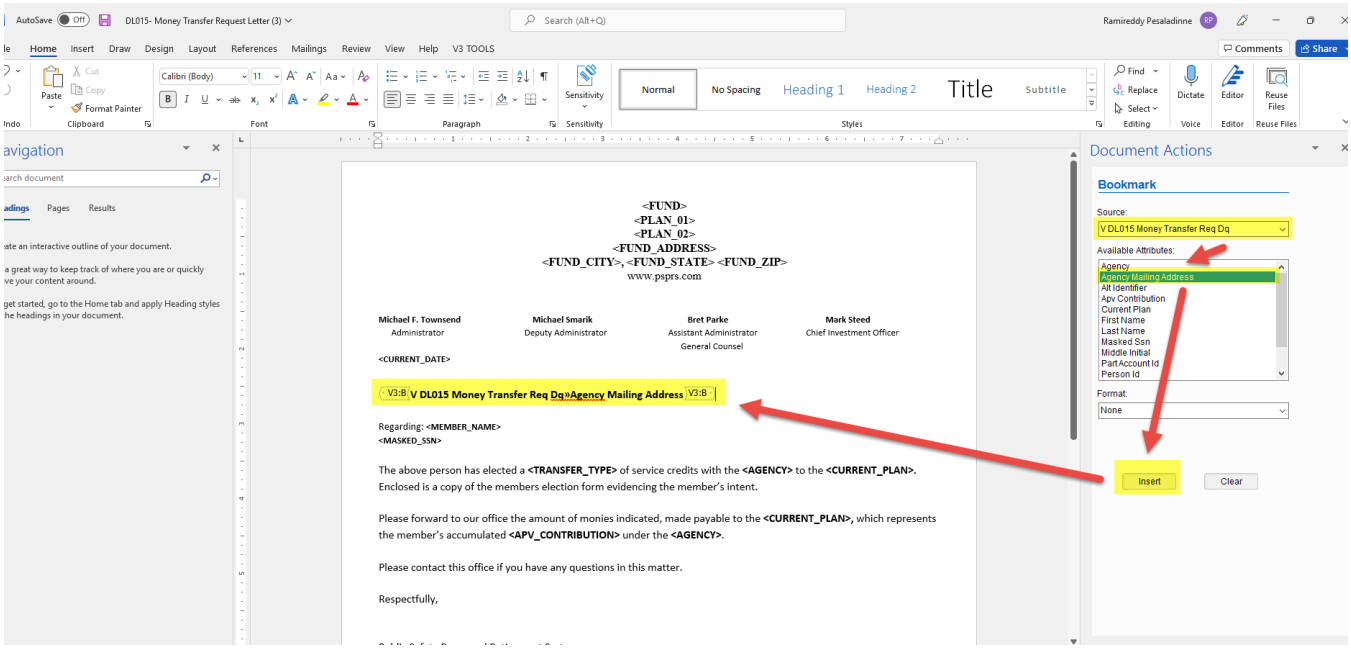
- Open the MS word and select related query name from source.



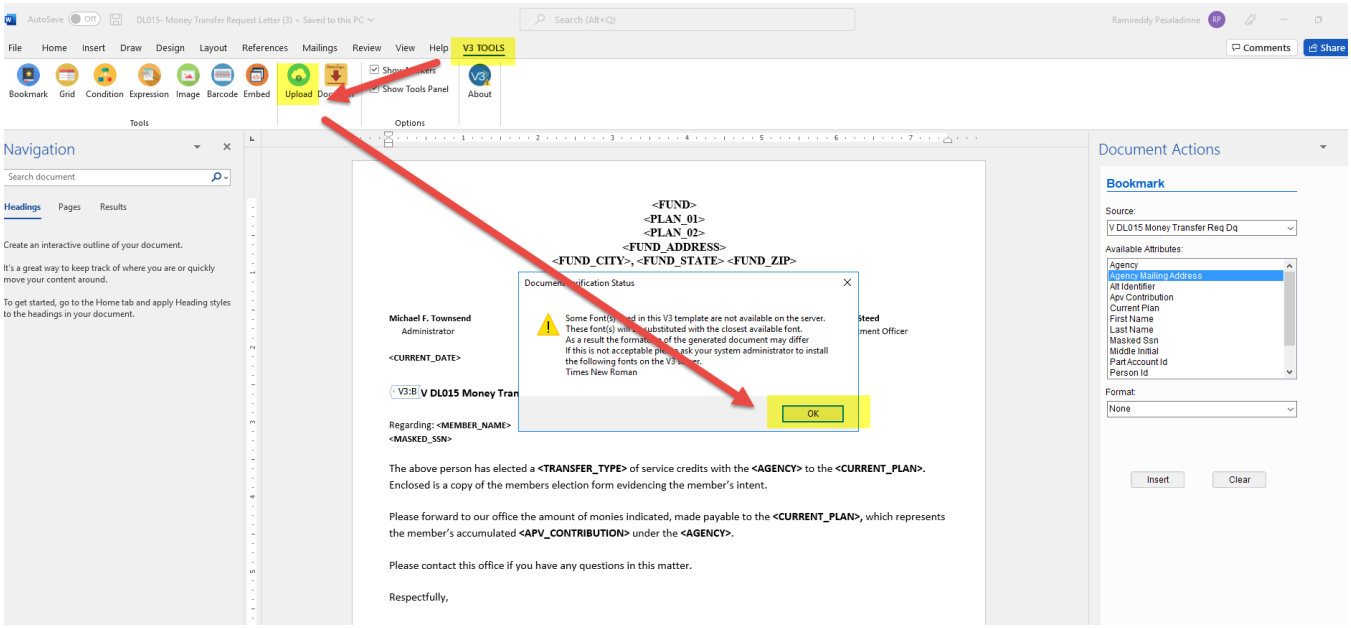
- Select the bookmarks from source.

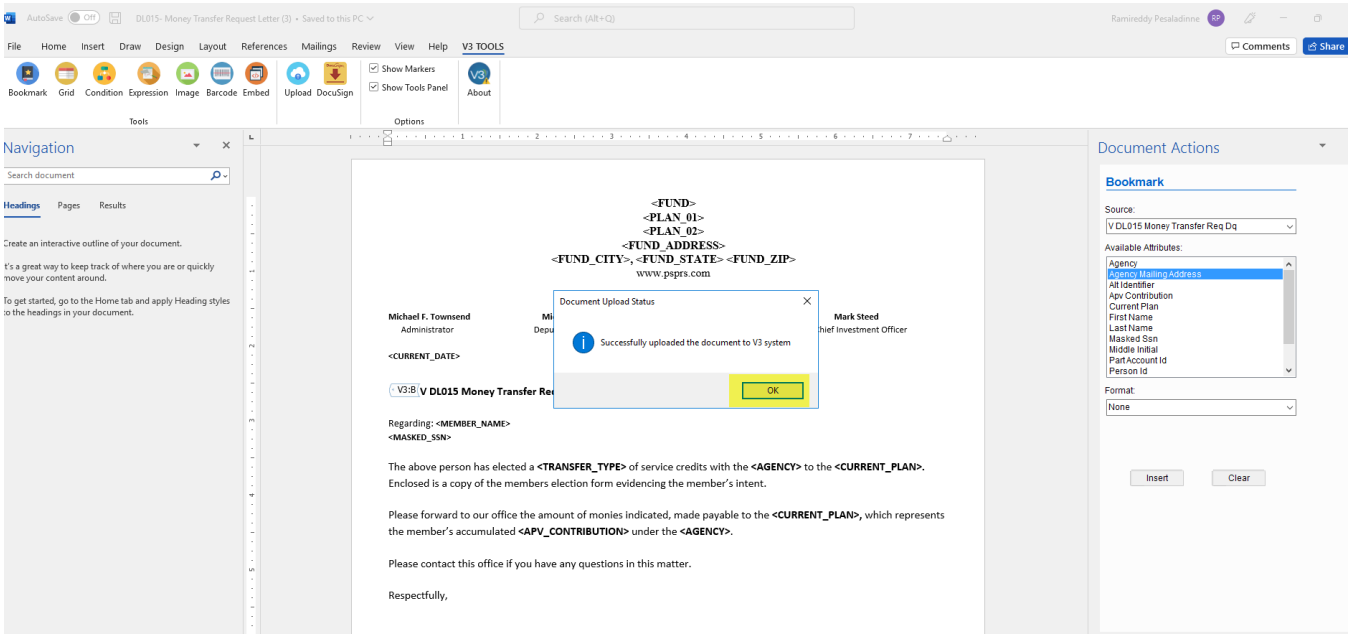


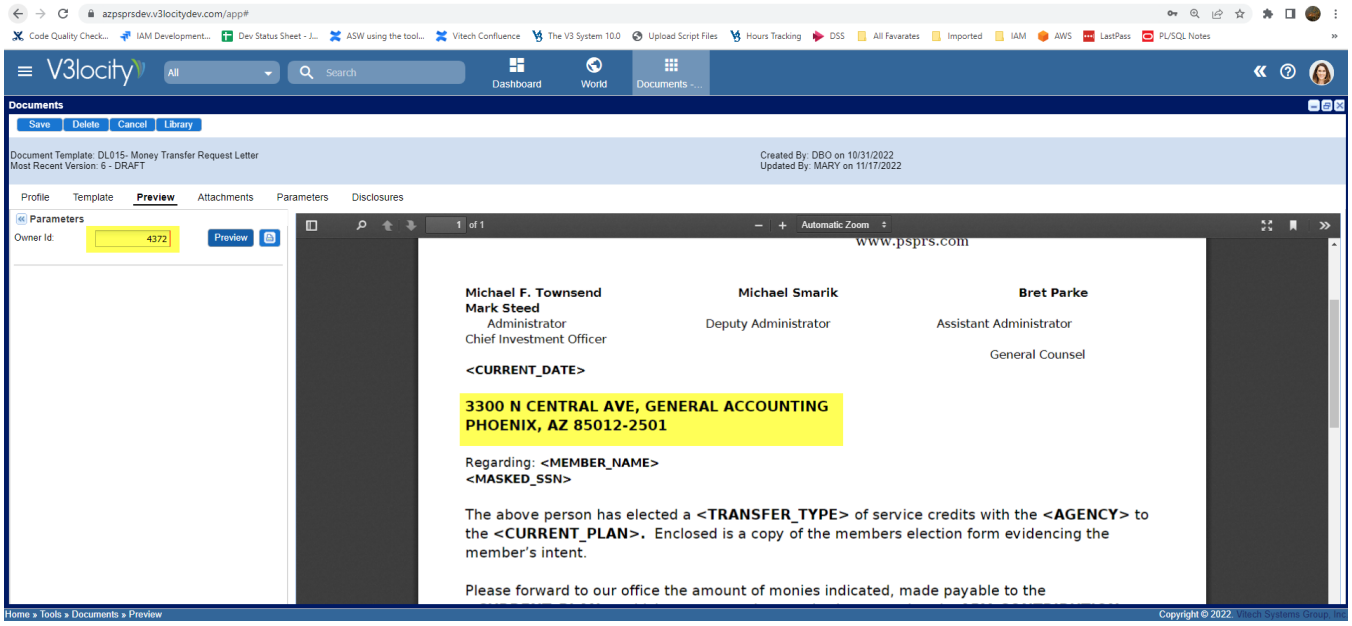
- Delete the static bookmark from MS word and replace the query bookmark, select bookmark from source and click on insert.



- Click on V3tools-upload-ok-ok







- Please pass the owner entity then review the bookmarks.
